1. Introduction

Dear Customer,

Thank you for choosing a HygroMatik steam humidifier.

HygroMatik steam humidifiers represent the latest in humidification technology.

In order to operate your HygroMatik steam humidifier safely, properly and efficiently, please read these operating instructions.

Employ your steam humidifier only in sound condition and as directed. Consider potential hazards and safety issues and follow all the recommendations in these instructions.

If you have additional questions, please contact your expert dealer.

For all technical questions or spare parts orders, please be prepared to provide unit type and serial number (see name plate on the unit).

1.1 Typographic Distinctions

• preceded by a bullet: general specifications

» preceded by an arrow: Procedures for servicing or maintenance which should or must be performed in the indicated order

☑ Installation step which must be checked off.

* Terms used with graphics or drawings

1.2 Documentation

Please note

In addition to this manual, the appropriate FlexLine Control documentation is mandatory for the operation of the unit.

Retention

Please retain these operating instructions in a secure, always accessible location. If the product is resold, turn the documentation over to the new operator. If the documentation is lost, please contact HygroMatik.

 Versions in Other Languages

These operating instructions are available in several languages. If interested, please contact HygroMatik or your HygroMatik dealer.

1.3 Symbols in Use

1.3.1 Specific Symbols related to Safety Instructions

According to EN 82079-1 (and ANSI Z535.6), the following signal words are used within this document:

⚠️ DANGER

DANGER indicates a hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ WARNING

WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ CAUTION

CAUTION indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

NOTICE

NOTICE is used to address practices not related to physical injury.

1.3.2 General Symbols

Please note

This symbol is used whenever a situation requires special attention beyond the scope of safety instructions.
1.4 Intended Use

HygroMatik electric heater steam humidifiers serve for steam production based on tap water, partially softened water or fully desalinated water/cleaned condensate.

Proper usage also comprises the adherence to the conditions specified by HygroMatik for:

- installation
- dismantling
- reassembly
- commissioning
- operation
- maintenance
- disposal.

Only qualified personnel may operate the unit. Persons transporting or working on the unit must have read and understood the corresponding parts of the Operation and Maintenance Instructions and especially the chapter 2. “Safety Notes”.

Additionally, operating personnel must be informed of any possible dangers by the provider. A copy of this manual is to be placed at the unit’s operational location.

By construction, HygroMatik steam humidifiers are not qualified for exterior application.

⚠️ WARNING

Risk of scalding!
Steam with a temperature of up to 100 °C (212 °F) is produced.
Do not inhale steam directly!
2. Safety Instructions

These safety instructions are required by law. They promote workplace safety and accident prevention.

2.1 Guidelines for Safe Operation

2.1.1 Scope

Comply with the accident prevention regulation „DGUV Regulation 3“ to prevent injury to yourself and others. Beyond that, national regulations apply without restrictions.

2.1.2 Unit control

Do not perform any work which compromises the safety of the unit. Obey all safety instructions and warnings present on the unit.

In case of a malfunction or electrical power disruption, switch off the unit immediately and prevent a restart. Repair malfunctions promptly.

⚠️ WARNING

Restricted use.

IEC 60335-1 stipulates as follows:
This device may be used by children of eight years of age and above as well as by persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge so long as they are supervised or have been instructed regarding the safe use of the device and understand the hazards that may result from it. Cleaning and user maintenance of the unit must not be undertaken by children without supervision.

2.1.3 Unit Operation

⚠️ WARNING

Risk of scalding!
Uncontrolled hot steam escape in case of leaking or defective components possible. Switch off unit immediately.

NOTICE

Risk of material damage!
The unit may be damaged if switched on repeatedly following a malfunction without prior repair.
Rectify defects immediately!

The unit must not be operated on a DC power supply.
The unit may only be used connected to a steam pipe that safely transports the steam.
Regularly check that all safety and monitoring devices are functioning normally. Do not remove or disable safety devices.
2.1.4 Mounting, dismantling, maintenance and repair of the unit

**NOTICE**
The HygroMatik steam humidifier is IP20 protected. Make sure that the unit is not object to dripping water in the mounting location.

Installing a humidifier in a room without water discharge requires safety devices to protect against water leakages.

- Use genuine spare parts only
- After any repair work, have qualified personnel check the safe operation of the unit
- Attaching or installing of additional components is permitted only with the written consent of the manufacturer

2.1.5 Electrical

**WARNING**
Risk of electrical shock!
Hazardous electrical voltage!

Any work on the electrical system to be performed by certified expert staff (electricians or expert personnel with comparable training) only.

Disconnect unit components from electrical power supply prior to work.

After electrical installation or repair work, test all safety mechanisms (such as grounding resistance).

---

**NOTICE**
Use only original fuses with the appropriate amperage rating.

Regularly check the unit’s electrical equipment. Promptly repair any damage such as loose connections or burned wiring.

Responsibility for intrinsically safe installation of the HygroMatik steam humidifiers is incumbent on the installing specialist company.

---

2.2 Disposal after dismantling

The operator is responsible for the disposal of unit components as required by law.
3. Transport

3.1 Overview

**Please note**
Proceed carefully when transporting the steam humidifier in order to prevent damage due to stress or careless loading and unloading.

3.2 Packing

**Please note**
Pay attention to the icons affixed to the packing box.

3.3 Interim Storage

Store the unit in a dry place and protect from frost and strong sunlight.

3.4 Check for Complete and Correct Delivery of Goods

Upon receipt of the unit, confirm that:

- model and serial number on the name plate match those specified in the order and delivery documents
- the equipment is complete and all parts are in perfect condition

**Please note**
In case of damage from shipment and/or missing parts, immediately notify the carrier or supplier in writing.

<table>

4. Functional Description and Device Composition

4.1 Mode of Action

The immersion heater principle

Depending on the output rating, one, three or six heater elements are arranged within a closed cylinder. The FlexLine humidifiers FLH80 and FLH100 combine two steam cylinders in one housing.

Examplary given, the figure below shows the heater element and other main components of a FlexLine steam generator model with one steam cylinder.

The cylinder(s) are filled with either tap water of varying quality, fully desalinated water or partially softened water.

The heat introduced by the heater elements heats up the cylinderwater to approx. 100 °C (212 °F), transforming the water into steam with a temperature of approx. 100 °C (212 °F). This steam is virtually mineral-free and germ-free.

When fully desalinated water is used, the cylinder water is almost totally clear of minerals. This situation guarantees a long lifetime of the cylinder(s) and the heater element(s), since virtually no hardeners will fall-out and no mineral deposits will occur. Such, the number of inspections and/or maintenance operations required will be reduced to a minimum.

When tap water is used for operation, some of the minerals dissolved in the water are likely to settle in the cylinder in form of solids of various compositions. However, most of the solids are flushed out by cyclic blow-down with the help of a heavy-duty blow-down pump.
4.2 Operational sequence

The steam humidifier is switched on by pressing the control switch on the front panel to the „I“ position. If the safety chain is closed, the inlet solenoid valve (25) opens and water is fed into the steam cylinder.

Filling level in the cylinder is controlled by a level control device (27). In a plastic cylinder, connected to the steam cylinder via hoses in the way communicating tubes are connected, a sensor for continuous proportional water level survey is located.

The cylinder water is periodically blown down. For usage of the unit with fully desalinized water, the blow-down function may be blocked.

Water blow-down is achieved by means of the blow-down pump (32) that is continuously monitored during unit operation. In case of pump disruption, the HygroMatik steam humidifier is shut off.

With normal water quality, blow-down loss is in the range of 7 to 15% of the steam amount produced. Depending on water quality, a full steam cylinder blow-down is run every 3 to 8 days.

Mineral deposits settle in the open area below the heater element(s) and are removed through periodic maintenance. The blow-down pump itself has wide openings and can flush out smaller pieces of mineral deposit. This extends the service life of the unit and reduces the required maintenance interval.

On blow-down, water flows from the pump into the drain hose system.

For maintenance purposes, the cylinder water may be pumped out by pressing and holding the control switch in the „II“ position.

4.3 Internal Output Setting

Continuous control is achieved by proportional driving (pulse width modulation) of one of the heater elements and phased addition of further elements. In this way the humidifier can be proportionally operated across the entire output range of 5% - 100% of the nominal capacity.

A power setting of 0% to 5% of the nominal output is possible, but not technically feasible due to condensate losses in the steam line.

4.4 Mechanical Construction

The HygroMatik FLP series units feature a stainless steel steam cylinder and - as an ordering option - a fourfold solenoid valve for the exceedingly precise steam control.

The type of housing is designed for wall mounting.

*) numbers indicated correspond with those in the exploded view in the „Exploded view“ chapter.
5. Mechanical installation

**WARNING**

Risk of foot injuries!
Prevent unit from dropping during installation!
Helping hand of a second person is advisable.

**WARNING**

Risk of electrical shock!
Hazardous electrical voltage.
During installation, the unit must be disconnected from power supply.

5.1 Environment Parameters to be met and Mounting Recommendations

When selecting the installation site for the steam humidifier, take the following into account:

- The minimum clearances indicated in the fitting measures section must be observed in order to ensure adequate unit ventilation and allow for unobstructed access in case of maintenance
- Protection class IP20
- By design, HygroMatik steam humidifiers are not qualified for outdoor installation (electronic components and water-bearing parts may be damaged)
- Ambient temperature must lie between +5 and +40 °C (+41 and +104 °F) in order to protect the unit electronics against damage; frost may damage the steam cylinder, the solenoid valve and pump, as well as make hoses burst
- Relative humidity must not exceed 80 % r.h., since values beyond may lead to electronic malfunction or damage
- Installation in a closed room requires aeration and, eventually, temperature conditioning in order to meet the a.m. environmental conditions
- The steam humidifier should be installed as close as possible to the steam manifold. Optimum performance is only guaranteed when steam and condensate hoses are kept short
- Make use of existing water connections for supply and draining
- Hoses must be laid at a consistent 5 to 10 % incline/decline; sagging and kinking prevention is a must
- Mount the unit on a stable, preferably solid wall offering the bearing capacity required (s. unit technical specifications). If such a wall is not at hand, the unit may be attached to a stand bracket firmly bolted to the floor
- For proper functioning of the level control, plumb and level installation of the unit is required
- The steam humidifier rear panel heats up during operation to a maximum of 70 °C (158 °F). Take care that the construction on which the unit is to be mounted is not made of temperature-sensitive material

Wall clearances

When mounting the steam humidifier, the wall clearances shown in the fig. below must be obeyed:

Mounting principle

For wall mounting drill measures, please consult the table above (measure A). In case of no suitable wall available for mounting the unit, it is recommended that installation is made on brackets firmly anchored in the floor.

» mark the holes for the upper suspension brackets screws
» drill holes and dowel
» screw in the supplied mounting screws; let the screws protrude approx. 12 mm/.5 inch from wall
» ensure firm fixation and load-carrying capacity of the mounted screws!
» hook in the unit and ensure safe suspension
» mark the holes for the lower suspension brackets screws
» remove the unit
» drill holes and dowel
» hook in the unit and mount the lower screws firmly

To function properly, the steam humidifier must hang level and plumb.
Device connections:

- Steam outlet
- Water inlet
- Cable entries
- Waste water connection
- Device front
5.2 Unit Installation Check

Before start-up, pls. check proper unit installation following the list below:

☑️ Unit perpendicularly aligned in both the vertical and horizontal axis?

☑️ All clearances obeyed?

☑️ Steam hose installed with a 5 - 10 % minimum incline/decline (see chapter "Steam line")?

☑️ Condensate hose features a loop functioning as a steam barrier (see chapter “Condensate hose”)?

☑️ Steam manifold(s) properly positioned?

☑️ All bolts and clamps properly tightened?

☑️ Steam manifold(s) horizontally mounted and suspended on the free end, if required?

☑️ All seals (o-rings) in place?

☑️ All ventilation slots on housing top unobscured?
5.3 Absorption Distance \( B_N \)

The "absorption distance" (\( B_N \)) is defined as the distance from the steam feed to where the steam is completely absorbed in the treated air. Within the absorption distance, steam is visible as mist in the air stream.

Condensation may occur on anything installed within the absorption distance.

Although steam outside the absorption distance (\( B_N \)) is completely absorbed, it is not yet evenly diffused in the duct. If you plan to install any parts or devices inside the absorption distance, such as sensors or elbows, we recommend increasing the absorption distance using the formulae below. The absorption distances required for certain installed fittings are distinguished by separate symbols and calculated as a multiplier of the absorption distance \( B_N \).

The absorption distance has no fixed value, but depends on many factors. These are depicted in the absorption distance nomogram below.

### Absorption Distance

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Formula</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>( B_N )</td>
<td></td>
<td>for normal obstructions such as sensors, ventilators, outlets</td>
</tr>
<tr>
<td>( B_C ) = (1.5...2) ( B_N )</td>
<td></td>
<td>for fine filters, heat registers</td>
</tr>
<tr>
<td>( B_s ) = (2.5...3) ( B_N )</td>
<td></td>
<td>for particle filters</td>
</tr>
<tr>
<td>( B_d ) = (3...5) ( B_N )</td>
<td></td>
<td>for humidity sensors, duct humidistats</td>
</tr>
</tbody>
</table>

The length of the absorption distance can be reduced by using multiple steam manifolds (also see section on the steam manifold).

**Method:**

Graphically determine absorption distance \( B_N \) using the absorption distance nomogram (also see Section „Absorption Distance Nomogramm“). Enter the value of the parameters enumerated above into the respective quadrants. The resulting point of intersection indicates the value of the desired absorption distance \( B_N \).

**Notes:**

- Air humidity before humidification \( x_1 \).....[g/kg]
- Air temperature after humidification \( t_2 \)......[°C]
- Specific increase in humidity \( \Delta x \).........[g/kg]
- Quantity of steam introduced \( m_D \) :.......[kg/h]
- Air speed \( w_L \).........................[m/s]
- Total length of steam manifold \( l_D \):........[mm]

---

| \( B_N \) | quantity of steam introduced \( m_D \) in kg/h. |
| \( B_C \) = (1.5...2) \( B_N \) | air speed \( w_L \) in m/s in air duct |
| \( B_s \) = (2.5...3) \( B_N \) | Total length \( l_D \) of the steam manifold installed in the air duct |
5.3.2 Absorption Distance Nomogram

Example
Given: circulating air mode
\( x_i = 5 \text{ g/kg}, \Delta x = 3 \text{ g/kg} \)
\( t_i (\approx t_f) = 20^\circ \text{C} \)
\( \dot{m}_D = 100 \text{ kg/h}, l_b = 1,25 \text{ m} \)
\( w_L = 5 \text{ m/s} \)

Result:
absorption distance \( B_n \approx 0,8 \text{ m} \)

5.4 Steam Manifold

5.4.1 General installation guidelines

When installing steam manifolds, pls. follow these guidelines:

Positioning within duct

- Install the steam manifold as close as possible to the steam humidifier in order to minimize steam loss through condensation.
- Steam manifold placement on the supply side of the air duct is preferable.
- Install steam manifold strictly horizontal in order to ensure proper condensate drain.
- Shown installation and positioning dimensions are based on empiric values. Special environmental conditions may require adjustments. Pay special attention to avoid condensate generation in air duct.

Allowable pressures

- Max. allowable pressure in air duct is 1500 Pa/.218 PSI (exemption: SLE02 only allows for 1200 Pa/.174 PSI).
- On suction side, max. -500 Pa (.07 PSI) is tolerable.
- With high-pressure air conditioning systems, modifications of the unit’s drain hose system may possibly be required depending on the overall pressure situation. These modifications must be coordinated with your expert dealer.

Water drain

- We point out that according to the German Association of engineers (VDI) guideline VDI 6022, a water drain must be provided within the absorption distance inside the air duct.

When increased airflow speed is encountered

- Air flow rates beyond 3m/s (9.84 ft/s) may lead to condensate drainage problems at the steam manifolds due to vacuum built-up. A possible remedy is twisting the steam manifold in its horizontal axis by few angular degrees. In case of problems, pls. consult your expert dealer.

5.4.2 Recommendations for dimensioning

The recommendations given below are based on homogenous air flow in the duct.

Horizontal installation of steam manifold

Standard steam manifold arrangement:

Air flow direction

Steam manifold (Side view)

Air duct

L1=L2=L3

L1=Hmin

An even distribution of steam manifolds ensures a uniform steam distribution.

*) s. table of manifold lengths

Horizontal assembly position in duct

Please use the total hight of the duct!
Minimum distance for condensation avoidance:

- **L_{min} = 210mm/8.3 inch**: "Steam manifold - Next steam manifold" distance
- **L_{4min} = 120mm/4.7 inch**: "Lowest steam manifold - Duct bottom plane" distance
- **L_{5min} = 120mm/4.7 inch**: "Highest steam manifold - Duct ceiling plane" distance

*** Special lengths on demand.
**** will be replaced in 2019 by 1500 mm / 59.1 inch long steam distributors

**Number and size** of the steam manifolds available as well as the nominal diameter of the respective steam and condensate hoses may be taken from the tables shown in chapter „Technical Data“.
5.5 Steam line and condensate hose layout

**Please note**
Because of the high requirements on hose material under the operating conditions given, it is recommended to use genuine HygroMatik hoses only.

5.5.1 Guide lines for steam line design

- Steam hose nominal diameter must not be smaller than the steam outlet of the HygroMatik steam humidifier (do not restrict the cross-section, otherwise back pressure will increase)
- Steam hoses must be laid without sags and kinks and with a continuous slope of 5-10% (otherwise sags may result).
- Steam hoses must be supported every 500 mm (20 inches) by clamp brackets
- Steam hoses should be kept as short as possible. Implement lengths beyond 5 m (16 ft.) as insulated fixed piping to keep energy loss and condensate generation to a minimum. Beyond 10 m (32 ft.) insulated installation is a must. Fixed piping is generally recommended for straight steam line segments
- When 2 steam manifolds are in use (other than with a standard implementation), place steam Y piece as close as possible to the steam manifolds. Such, for the main part of the piping just one steam hose is required and condensate loss is minimized
- Allow easy access to the steam pipe/steam hose installation
- Pressure conditions within the duct are influenced by device steam output, steam line layout and the duct composition itself. In some rare situations it may become necessary to optimize steam line layout for achieving the results intended
- Respect minimum bending radii:

<table>
<thead>
<tr>
<th>Diameter</th>
<th>Radius</th>
</tr>
</thead>
<tbody>
<tr>
<td>DN 25</td>
<td>200 mm</td>
</tr>
<tr>
<td>DN 40</td>
<td>400 mm</td>
</tr>
</tbody>
</table>

5.5.2 Condensate hose layout

The condensate hose may be run from the steam manifold back to the steam cylinder, as depicted in the schematic drawing below with concern to installation type 1. Alternatively, the condensate hose may be fed directly in a wastewater pipe or a drain (s. installation type 2).

**Please note**
Should condensate return into the steam cylinder be intended, the connection stub on the cylinder upper part must be drilled out first with a ANSI drill size „O“ drill. To do so, the steam cylinder must be removed from the housing (s. maintenance chapter, section „Steam cylinder removal and reinstallation“).

Drill out condensate hose connection stub with an 8 mm (ANSI drill size „O“) drill, if required

Steam cylinder top view
5.5.3 Steam line and condensate hose installation types

Installation type 1
Steam manifold is positioned more than 500 mm above device upper edge:

» Run steam hose to a height of 400 mm/16 inch minimum above the steam humidifier and then to the steam manifold with a continuous incline of 5 to 10%.

» Feed condensate hose from steam manifold with a decline into wastewater pipe or drain.

» As a steam barrier, lay out a 200 mm/8 inch min. loop (s. schematic representation below). Minimum distance from steam manifold to loop must be 500 mm/20 inch. Fill loop with water prior to steam humidifier commissioning.

Installation type 2
Steam manifold is positioned less than 500 mm above or below device upper edge:

Please note
In this arrangement the condensate hose cannot be fed back to the steam humidifier.

» Run steam hose to a height of 400 mm/16 mm minimum above the steam humidifier and then to the steam manifold with a continuous decline of 5 to 10%.

» Feed condensate hose to a wastewater pipe/drain with a 200 mm/8 inch diameter loop as a steam barrier. Minimum distance from steam manifold to loop must be 500 mm/20 inch. Fill loop with water.
6. Water connection

**WARNING**

Risk of scalding!
Very hot water to be found in and around the steam humidifier during and after operation. Have all installation work done by expert staff in order to avoid scalding hazards due to improper water guidance.

**WARNING**

Risk of electrical shock!
Hazardous electrical voltage!
Before starting installation work ensure that the unit is not yet connected to the power supply.

General Rules

- Obey local water utility regulations
- Verify that necessary safety measures have been taken – in compliance with either German Technical and Scientific Association for Gas and Water (DVGW) guidelines (DIN EN1717) or local regulations – that eliminate backflow of polluted water into drinking water treatment facilities. This may require the installation of a system separator of the CA type (minimum measure, allowable only when free discharge into the drainage system is given). Within the humidifier, a double check valve (58) is located in the water supply line. It prevents - in accordance with DIN EN 61770 - the backflow of water.
- Supply water must not exceed 40°C
- Allowable range of water pressure: 1 to 10 bar (100 x 10³ to 100 x 10⁴ Pa)
- For connection to the water supply pipe, make use of a water hose
- Blow-down water must drain freely
- min. conductivity of feedwater: 3µS/cm

6.1 Water supply

**NOTICE**

Foreign material in water supply pipe may cause premature wear of the solenoid valve.
Flush the water supply pipe before making connection to the solenoid valve. This is of particular importance in case of a newly installed pipe.

» Install a shut-off valve (SV) in the supply line.
» Install a water filter (WF) if required due to bad water quality.
Please note
Shut-off valve (SV) and water filter (WF) are not included in the delivery.

For connection to the water supply line, the water hose (56) with cap nuts (1) on both ends supplied with the unit may be used.

Make connection as follows:

» Attach cap nut with inner seal ring to inlet screw joint on the humidifier housing and tighten.

Do not overtighten the cap nut!
Excessive tightening will destroy the fitting.

Please note
Strainer must be placed inside the solenoid valve.

» Screw the other hose end cap nut with its inner seal on a customer-provided water tap (cap nut internal thread is ¾”) .
6.2 Water discharge

**WARNING**
Risk of scalding!
During blow down, up to 0.3 l/sec are being drained with a temperature of about 95 °C. Ensure that the drain hose is reliably fastened and wastewater can drain freely and pressureless.

---

**Please note**
Humidifier installation location and wastewater discharge must be on the same pressure level. In case of a drain connection on positive pressure, pls. consult your expert dealer.

---

**Guidelines for water discharge composition**
- Use flexible water hose
- Do not buckle drain hose
- Discharge line and drain pipe material must be temperature resistant up to 95°C

**How to proceed**

» Run a 1 1/4 " drain hose of 250 to 1000 mm length into a pressure-free outlet according to DIN EN 1717. The hose must be guided sideways of the humidifier to prevent ascending vapor from condensating on the humidifier’s housing.

» Fit drain hose to connection stub on humidifier housing bottom side.

» Slide pump drain hose onto one of the grounding clips (s. fig. below).

» Slide overflow hose of the HyFlow system separator (if present) onto the other grounding clip.

---

**Grounding clip functioning**
The two grounding clips attached to the inner surface of the housing drain stub are in direct contact with water and shunt potential residual electric currents away from the housing during blow-down and in case of a cylinder water overflow.

Between the pump drain hose jacket and the inner surface of the cabinet drain connection, a gap exists due to the diverging diameters. If water collects on the base plate, it will flow through this gap into the drain hose and then into the drainage system.

---

**Please note**
With the optional wastewater cooling system HyCool (not available for FLP-XX-TPRO units), HygroMatik offers an option for limiting the steam humidifier wastewater temperature in order to protect thermosensitive wastewater pipe lines. By blending with tap water during blow-down, wastewater temperature is below 60 °C as long as inlet water temperature does not exceed 30 °C.
6.3 Water connections final check

Go down the following water installation checklist:

☑ All screws and clamps properly tightened?
☑ Water supply line flushed before making connections?
☑ Water connection properly installed?
☑ Water discharge properly installed?
☑ Does blow-down water drain freely?
☑ Water supply line and water discharge leakage-free?
7. Electrical connection

**WARNING**
Risk of electrical shock!
Hazardous electrical voltage.
All work related to electrical installation to be performed by expert staff (electricians or expert personnel with equivalent training) only.

**Please note**
The customer is responsible for checking expert staff qualification.

Do not connect the steam humidifier to the live power supply before all installation work has been completed.

General installation rules
- All local rules concerning the implementation of electrical installations must be obeyed
- Electric connector cables to be laid professionally
- Install the electrical connections according to the wiring diagram
- With units of a nominal power output > 33 kW electrical connection to a permanent line is mandatory (according to VDE 0700 Part 98)

**NOTICE**
Possible electronical components destruction through electrostatical discharge!
Prior to commencing electrical installation work, steps must be taken to guard the sensitive electronical components of the unit control against damage from electrostatical discharge.

7.1 Electrical installation approach

» Provide fuses with a contact gap of at least 3mm per pole.

» Install a separate main connection for each steam cylinder including main circuit breaker, main switch etc.

» Make main connection according to the table below.

Main connection
For the FlexLine steam humidifiers in the standard version, main connection is to be implemented as follows:

<table>
<thead>
<tr>
<th>Model</th>
<th>Main connection</th>
</tr>
</thead>
<tbody>
<tr>
<td>FLH03</td>
<td>220 - 240 VAC 1/N, 50 - 60 Hz</td>
</tr>
<tr>
<td>FLH06</td>
<td>380 - 415 VAC 3, 50 - 60 Hz</td>
</tr>
<tr>
<td>FLH09</td>
<td></td>
</tr>
<tr>
<td>FLH15</td>
<td></td>
</tr>
<tr>
<td>FLH25</td>
<td></td>
</tr>
<tr>
<td>FLH30</td>
<td></td>
</tr>
<tr>
<td>FLH40</td>
<td></td>
</tr>
<tr>
<td>FLH50</td>
<td></td>
</tr>
</tbody>
</table>

Other operating voltages on request.

Fusing

**Please note**
HygroMatik recommends the use of slow blowing up to middle time-lag main fuses (applies only when the a.m. mains supply voltage is in use).

Steam humidifier installations should incorporate an individual residual current circuit breaker.
Maximum current draw of the FlexLine standard models and the required fusing resulting from that can be taken from the table below.

<table>
<thead>
<tr>
<th>Model</th>
<th>Current draw [A]</th>
<th>Fusing [A]</th>
</tr>
</thead>
<tbody>

7.3 Safety interlock

**WARNING**

Risk of electrical shock!
Hazardous electrical voltage.
When standard wiring was made, terminal 1 shows 230 VAC after commissioning.

Across terminal 1 and 2 the so-called safety interlock is wired. This wiring allows for integration of safety devices. In case of an open safety interlock the steam humidifier does not operate.

Install contact interlocks, e.g. a max. hygrostat, vane relays, pressure controllers, air interlock devices etc. in series across terminal 1 and 2.

**Please note**
Factory setting leaves the safety interlock open!

Install contact interlocks, e.g. a max. hygrostat, vane relays, pressure controllers, air interlock devices etc. in series across terminal 1 and 2.

**NOTICE**
Contacts across terminals 1 and 2 must be potential free and properly rated!
Rating must comply with the control voltage in use.

Best practice implies the integration of a max. hygrostat in the safety interlock wiring to protect against over-humidification due to a r.h. sensor malfunction.

---

7.4 Connection diagram

Pls. find the full wiring diagram in the „Flex-Line Control“ manual (section „Wiring Diagrams“).

7.5 Electrical installation check list

Check electrical installation with respect to customer-site requirements and local power supply regulations.

- Safety interlock properly wired across terminals 1 and 2?
- Supply voltage in accordance with name plate voltage rating?
- All electrical connections made according to the wiring diagram?
- Is the sensor (temperature sensor or r.h. sensor, depending on the application scenario) properly connected to the main p.c.b. ? (make sure that the input selected is adequate for the type of sensor installed with respect to the signal type and range specified).
- All screw terminal connections properly tightened?
- Have all electrical cable and plug connections been properly tightened?
- Proper unit grounding made?
8. Commissioning

⚠️ WARNING
Risk of operating error!
Start-up of the unit is restricted to expert staff only (electricians or expert personnel with equivalent training).

Step 1: Check of mechanical integrity and wiring
  » Open housing cover.
  » Check cylinder seating.
  » Check steam, condensate and drain hose clamps.
  » Check that all electrical wire connections (including steam cylinder wiring) are tight and secure.

Step 2: Switching on the steam humidifier
  » Switch on main breaker.
  » Open water supply stopcock (operating pressure should be 1bar min., 10bar max./14.5 psi min., 145 psi max.).
  » Switch on unit by setting control switch to “I”.

Step 3: The unit performs a self-test and, then, commences normal operation
  • During self-test, the On/Off button icon флashes for a couple of seconds
  • On completion of the test, the software version is displayed for a short moment. Consequently, normal operation is commenced. However, steam is not produced without a demand pending.

Step 4: Trigger steam demand
  » Set control for commissioning check for permanent steam demand and close safety interlock.
  The water inlet solenoid valve opens and feeds water into the steam cylinder

Step 5: Monitor unit function and check for leakage
  » Let unit operate for 15 to 30 minutes.
  » If leaks appear, switch off the unit.

⚠️ WARNING
Risk of electrical shock!
Hazardous electrical voltage!
Follow safety instructions for work on live components.

Step 6: Repair leaks
  » Find leaks and eliminate.
  » Check again for leaks.
  » When everything is o.k., reattach housing cover.
9. Maintenance

9.1 General

For the achievement of a long unit life span, regular maintenance is a must. Maintenance works to be performed refer to unit assemblies that underlie either mechanical or electrical wear and tear, or may be impeded by residues in their proper functioning.

A steam humidifier’s optimal performance and the maintenance intervals required primarily depend on the water quality encountered and the amount of steam produced. A particular water quality may shorten or lengthen maintenance intervals. The amount of residues found in the steam cylinder allows for a hint on future maintenance intervals.

Another scenario influencing the unrestricted unit availability is the main contactor lifetime in terms of a maximum number of switch cycles allowed, as indicated by its manufacturer. Unit control monitors the number of switch cycles and produces a service message when the max. number is reached.

9.1.1 Service messages

In case of a service message produced, the HygroMatik logo in the main section of the touch display (for explanations see „FlexLine controls“ manuals) is blanked. Instead, a frame is shown with the service icon in it and a „Service message (xx)“ („xx“ indexes the message code). When the message frame is touched, the service message is displayed in clear language.

The service messages are listed in detail in the „FlexLine controls“ manuals. Following hereafter, pls. find 2 service messages denoted as examples:

• „Steam_amount_counter“ is output when the pre-set produced steam amount is reached. Maintenance of the device is necessary.
• „Cycles_main_contactor x“ is indicated when the number of cycles pre-set for main contactor „x“ (x = 1...5) is reached. The main contactor should then be replaced and the counter reset.

9.1.2 Service messages for preventive maintenance

HygroMatik steam humidifiers continuously monitor the performance of the following functional areas:

• Blow-down operations
• Cylinder filling

When reaching pre-set trigger levels, unit control outputs preventive service messages that relate to the corresponding functional area.

The functional area addressed should then be checked at short term and maintained, if required (s. „FlexLine controls“ manuals, „Service messages and warnings“ chapter).
9.1.3 Safety instructions for maintenance

⚠️ WARNING ⚠️

Risk of electrical shock!
Hazardous electrical voltage. Unit must be switched off and protected against restart by expert staff (electricians or expert personnel with equivalent training) before any maintenance work is commenced.

⚠️ WARNING ⚠️

Risk of skin burning!
Hot steam cylinder during operation and for some time afterwards. Drain steam cylinder before any maintenance work is commenced. After that, wait approx. 10 mins before starting maintenance work. Check steam cylinder temperature by cautious approximation with hand (do not touch!).

⚠️ WARNING ⚠️

Risk of scalding!
Water pumped or drained from the steam cylinder may have a temperature of up to 95 °C. Wear proper PPE (Personal Protection Equipment)!

⚠️ NOTICE ⚠️

Take care of ESD protection!
The electronic components of the humidifier control are very sensitive to electrostatic discharges. In order to protect these components during maintenance, steps must be taken to guard against damage from electrostatic discharge.
9.2 Maintenance framework when unit is operated with fully demineralised water and condensate

Instructions on maintenance and cleaning intervals are entirely based on empirical data.

<table>
<thead>
<tr>
<th>Cycle time</th>
<th>Maintenance work</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 weeks after initial commissioning</td>
<td>Visual inspection of electrical and mechanical connections.</td>
</tr>
<tr>
<td></td>
<td>Visual inspection of level control.</td>
</tr>
<tr>
<td></td>
<td>Visual inspection of the steam cylinder interior.</td>
</tr>
<tr>
<td>annually</td>
<td>Visual inspection of electrical and mechanical connections.</td>
</tr>
<tr>
<td></td>
<td>Visual inspection of level control.</td>
</tr>
<tr>
<td></td>
<td>Visual inspection of heater element and thermo switch.</td>
</tr>
<tr>
<td></td>
<td>Visual inspection of steam cylinder interior.</td>
</tr>
<tr>
<td></td>
<td>If required, cleaning of steam cylinder, heater element, thermo switch and level control followed by the replacement of all sealing.</td>
</tr>
</tbody>
</table>

9.3 Maintenance when unit is operated with tap water or partially softened water

No precise maintenance intervals can be specified because these always depend on water quality and the amount of steam generated. It is advisable to adjust the frequency of maintenance to the specific operational experience. HygroMatik recommends to check the opened steam cylinder 1 or 2 weeks after initial commissioning in order to quantify the amount of residue produced so far, allowing for determining future maintenance intervals and/or the adjustment of blow-down cycles possibly required.

Blow-down cycles

The vaporisation process causes hardness builders (calcium) in form of solids of various compositions to fall out within the steam cylinder. Cyclic blow-down by means of a powerful blow-down pump followed by fresh water refills remove parts of this solid built-up.

Water quality

When tap water is used, it must be taken into account that cleaning intervals shorten as the carbonate hardness level increases. As a general rule, it is preferable to operate the unit with fully demineralized water since operation will not be affected by mineral deposits and flushing loss will be minimized.

Please note

Possibly, maintenance intervals may be extended by moderately increasing the blow-down cycle rate. Please consult your expert dealer.
9.4 Removing and cleaning the steam cylinder

⚠️ CAUTION

Risk of eye injuries!
The clips that fix the steam cylinder halves have sharp edges and can jump off during dismantling. Eye injuries possible. Wear proper PPE (Personal Protection Equipment)!

Steam cylinder removal

» Remove unit housing cover

» Remove water sensor hose from cylinder top.

» Remove SuperFlush solenoid hose from cylinder bottom (if applicable).

» Remove steam hose from steam hose adapter.

If the steam hose is not to be disconnected, the steam hose adapter with the steam hose still attached may be detached from the steam cylinder as shown in the next figure.
Remove clip from steam hose adapter

Separate connector halves

Push clip onto adapter outside of unit housing

Remove cylinder flange clamps

Lift steam cylinder from cylinder base

Separate cylinder halves

Remove used o-ring
Reinstallation

- Reattach level control hose to cylinder cover.
- Reattach SuperFlush solenoid hose to steam cylinder bottom stub.
- Insert new o-rings in steam hose adaptor and cylinder base.
- Place cylinder vertically in cylinder base.
- Join cylinder halves and affix with clamps.
- Reconnect connector halves.
- Remove used o-rings from steam cylinder top and cylinder base.
- Reattach level control hose to cylinder cover.
- Reattach SuperFlush solenoid hose to steam cylinder bottom stub.
Attach steam hose adaptor to cylinder

Affix steam hose adaptor with clip

Open water supply

Activate main circuit breaker

Check for leakage in relevant areas

» Reattach unit housing cover
9.5  Steam cylinder and cylinder base cleaning

Removal of the steam cylinder is described in the „Removal and reinstallation of the steam cylinder“ section.

**NOTICE**

Risk of material damage!
Excessive force when cleaning the cylinder or the heater element(s) may harm these device parts.

Steam cylinder cleaning

Clean cylinder inside

Clean both strainers in cylinder

**NOTICE**

Risk of functional disruption!
Use descaler or cleaning detergents only for cylinder and heater element cleaning. Do not introduce in cylinder base or apply to hoses!

Prior to restarting the unit, make sure that the device assemblies in question are thoroughly flushed or rinsed.

» Remove all deposits. Small amounts of scale deposits on the heater element(s), however, are harmless.

Cylinder base cleaning

Just as the cylinder, the cylinder base and its connection joints must be checked for deposits and cleaned, if required.
9.6 Level control device cleaning

The level control device is accessible only after removal of the steam cylinder.

- Disconnect hoses from level control device connection stubs on upper and lower side
- Remove the 4 screws securing the metallic cover plate of the level control device and the device as such against the unit rear wall. Memorize ground wire attachment position (under lower left hand side screw).
- Unclip level control device enclosure cap with a flick of the thumb and remove.
- Take out o-ring and dispose of.
- Make visual inspection of level control device enclosure interior and clean, if required. Scratch out any deposits, if present.
- Inspect both level control connection hoses and clean, if required.
- Insert new o-ring.
- Re-attach enclosure cap.
- Align metallic plate with level control device enclosure mounting holes and insert screws in upper left and lower right position. Reintroduce level control device into humidifier housing and loosely affix to unit rear wall with the 2 screws.

» Insert the 2 screws remaining into the open level control device enclosure mounting holes while positioning the ground wire connection eyelet under the lower left screw.

» Handtighten all of the screws.

Please note

A functional check of the level control device may only be accomplished while the device is installed into the unit!
9.7 Heater element replacement

Removal

» Remove and open steam cylinder as described in the „Removing and cleaning the steam cylinder“ section.

» Separate thermo switch capillary tube from heater element(s) by detaching the retainer clips.

» Remove wiring of the heater element(s) in question from connector terminals (mark positions for reclamping).

» Unscrew heater element fixing nut(s) from cylinder cover.

» Remove adjusting washer and grounding lug/lock washer (if present) and pull heater element(s) downward out of steam cylinder cover.

» Clean the sealing surface on the underside of the cover around the area where the new heater element will be installed.

Reinstallation

» Install replacement heater element(s) (with new sealing) while considering the correct sequence of all of the mounting parts. Ensure proper grounding and tighten nut(s).

» Insert heater element wires into the terminals of the wiring connector following the markings made when dissembling. Polarity is not an issue.

» Refit thermo switch capillary tube to heater element(s) using retainer clips.

» Reassemble steam cylinder and reinstall in humidifier housing as described in the „Removing and cleaning the steam cylinder“ section.

9.8 Thermo switch replacement (for heater elements)

Removal

» Remove and open the steam cylinder as described above in “Removing and cleaning the steam cylinder” section.

» Remove wiring of the thermo switch from connector terminals (mark positions for reclamping).

» Detach capillary tube (T) retainer clips from heater element(s).

» Separate capillary tube from heater element(s) (4).

» Unscrew the two screws holding thermo switch (S) in place.

» Pull out thermo switch (O) upwards off steam cylinder cover (R).

Risk of material damage!

Do not buckle the thermo switch capillary tube!
Reinstallation

» Install replacement thermo switch with a new sealing.

» Properly connect the capillary tube to the heater element. In case of humidifiers with several heating elements, the capillary tube is attached to three heating elements.

» Insert thermo switch wires into the terminals of the wiring connector following the markings made when dissembling.

» Reassemble steam cylinder and reinstall in humidifier housing as described in the „Removing and cleaning the steam cylinder“ section.

9.9 Releasing a thermo switch that has triggered

To protect the steam humidifier against thermal overload, the unit is equipped with one or two thermo switches, depending on the unit capacity. Mounting positions for the thermo switches are on the cylinder cover. One of the thermo switches (or „the“ one, in case of only one thermo switch present) features a capillary tube for thermal coupling to the heater element. Additionally, the solid state relay is protected with a bi-metal switch attached to the heat sink to prevent damages caused by inadequate ventilation through e.g. covered vents.

From an electrical point of view, all of the thermo switches are connected in series. In case of one of the thermo switches triggering due to a temperature too high, the main contactor K1 drops, while the electronic control enters fault state „120“, i. e. „Thermoswitch“.

In case of one of the thermo switches triggering repeatedly, the reason for this must be identified prior to further unit usage.

Thermo switch(es) on steam cylinder cover.

After the unit has cooled down, the thermo switch that has triggered may be identified by passage measurement, as long as it is a thermo switch on a steam cylinder. Unblocking the thermo switch is accomplished as follows:

Slightly push down the red button (s. above section) protruding a few milimeters from its holder. This will make the button return to its original position and unblock the mechanism.

Relasing a thermo switch does not erase the fault message in the control fault memory.

Thermo switch on solid state relay

The thermo switch attached to the solid state relay is a bi-metal switch without an unblocking feature. Instead, after cool-down, the switch will be unblocked automatically.

Restarting the steam humidifier is only possible after cool-down.

9.10 Inspection of wiring connections and heater element wiring

**NOTICE**

Risk of functional disruption!
Risk of material damage!

Loose cable connections may result in increased transition resistance and contact area overheating.

» Check all cabling terminals and plugs for tight seating. Plugs must sit on their respective contacts as far as they will go.

» Check heater element wiring for damaged insulation
9.11 Removal and reinstallation of the solenoid valve including fine filter cleaning

Removal

» Shut off water supply and disconnect tap water hose cap screw connection.
» Remove connecting hose (20) from solenoid valve.
» Detach electrical cable connector from solenoid valve (25).
» Unscrew solenoid valve mounting screws.
» Remove solenoid valve from housing bore.

Fine filter cleaning

» Remove fine filter from solenoid valve tap water connection side and clean under running water.

Reinstallation

» Reinsert fine filter into solenoid valve.
» Reinsert solenoid valve with seal in unit housing bore.
» Bolt-down solenoid valve.
» Reestablish tap water connection.
» Reconnect electrical cable to solenoid valve.
» Reattach connecting hose (20) to solenoid valve using clamp.
» Turn on water tap.
» Switch on unit and check for leakages after 15 to 30 mins of operation.

Risk of electrical shock!
Hazardous electrical voltage!
Follow safety instructions for work on live components.
Leakages may invoke leak currents.

» In case of leakage turn off power supply and secure against being switched on again.
» Find leakage and eliminate.
» Check again.
9.12 Cleaning of blow-down pump

Removal and cleaning

» Remove steam cylinder as described in „Removal and reinstallation of steam cylinder“ section.
» Detach adapter (30) from pump (32).
» Detach electrical cable from pump.
» Unscrew mounting screws from housing bottom plate (safe vibration buffer, bolts and washers for reinstallation) and pull pump out of cylinder base (37).
» Open pump bayonet lock.
» Remove residues from pump and drain hoses (replace O-ring if required).

Reinstallation

» Moisten O-ring (33) and insert into cylinder base (37) horizontal stub.
» Push pump back into cylinder base and bolt to bottom plate incorporating the vibration buffer and washers saved during removal.
» Moisten O-ring (31) and insert into adapter.
» Slide adapter (30) onto pump stub.
» Refit electrical cable to pump connector (no polarisation).
» Let unit run for 15 to 30 mins, then check for leakages.

» in case of leakage turn off power supply and secure against being switched on again.
» Find leakage and eliminate.
» Check again.

Risk of electrical shock!
Hazardous electrical voltage!
Follow safety instructions for work on live components.
Leakages may invoke leak currents.

9.13 Inspection of hoses

Since steam and condensate hoses are prone to wear as well, those hoses should undergo regular checks as well.

9.14 Functional check

» Run the system with maximum output for a couple of minutes
» Check all safety devices.
» Check hose connections and seals for leakage.
9.15 Completion of maintenance

After completion of the extensive maintenance work the service interval is reset by using the parameter "Reset_cyl. 1" or "Reset_cyl. 2" (only for double cylinder units). In doing so the steam counter contains again the preset value after which next maintenance is required (see operating instructions FlexLine Controls", submenu "Service").
10. Dismantling

Once the steam humidifier will no longer be used, dismantle (demolish or scrap) it by following the installation procedures in reverse order.

**WARNING**

**Warning:** Dismantling of the unit may only be performed by qualified personnel. Electrical dismantling may only be performed by trained electricians.

**Please note**

Obey the safety guidelines in section “Safety Instructions,” especially the guidelines for disposal.
11. Declaration of Conformity

EU Konformitätserklärung
EU Declaration of Conformity

Hersteller / Manufacturer: HygroMatik GmbH
Anschrift / Address: Lise-Meitner-Straße 3, D-24558 Henstedt-Ulzburg, Germany
Produktbezeichnung / Product Description: FlexLine Heizkörper (FLH):
FLH03*, FLH06*, FLH09*, FLH15*, FLH25*, FLH30*, FLH40*, FLH50*
FLH60*, FLH100*
*(sowie Ausführungen, -T, oder -TSPA)

Die bezeichneten Produkte stimmen in der von uns in Verkehr gebrachten Ausführung mit den Vorschriften folgender Europäischer Richtlinien überein:
The products described above in the form as delivered are in conformity with the provisions of the following European Directives:

2014/30/EU Richtlinie des Rates zur Angleichung der Rechtsvorschriften der Mitgliedstaaten über die elektromagnetische Verträglichkeit.

2014/35/EU Richtlinie des Rates zur Angleichung der Rechtsvorschriften der Mitgliedstaaten betreffend elektrische Betriebsmittel zur Verwendung innerhalb bestimmter Spannungsgrenzen.

Die Konformität mit den Richtlinien wird nachgewiesen durch die Einhaltung folgender Normen:
Conformity to the Directives is assured through the application of the following standards:

Referenznummer: Ausgabedatum: Referenznummer: Ausgabedatum:
Reference Number: Edition: Reference Number: Edition:
DIN EN 61000-6-2 2006-03 DIN EN 60335-1 2012-10
DIN EN 61000-6-3 2011-09 DIN EN 60335-1 Ber.1 2014-04
DIN EN 62233 2008-11 DIN EN 60335-2-98 2009-04
DIN EN 62233 Ber.1 2009-04

The requirements of the German Product Safety Law ProdSG regarding the assurance of safety and health are met. Product modifications after delivery may result in a loss of conformity.

Henstedt-Ulzburg, den / the 29.09.2017

HygroMatik GmbH

Dirk Menssing
Geschäftsführer / General Manager

i.V. Frank Michaelsen
Leitung Technik / Head of Engineering

This declaration certifies the conformity to the specified directives but contains no assurance of properties. The safety documentation accompanying the product shall be considered in detail.

14. Exploded view

The figure following shows the FLH model composition. The number of cylinders and heater elements vary with respect to the complete FLH series.

The index numbers in the figure correspond to the spare parts list.
