

# HeaterLine Professional

The HeaterLine, heater type steam humidifiers for various water qualities, offer a new additional control option for the unit sizes 6 to 45 kg/h – the HeaterLine Professional.

The HeaterLine Professional is the solution for the application in areas where constant delivery is essential for its quality. As for example in humidifying demanding production processes.

The HeaterLine Professional has an even more precise control in the area 0 – 100% with a controllability of  $\pm 0.5\%$  when using demineralised water. In comparison, the HeaterLine Comfort comes with a controllability of  $\pm 1\%$ .

Additionally to the plus on controllability the Professional type offers all known advantages of our established HeaterLine units: a compact unit made of corrosion-resistant stainless steel with excellent access to its components.

Due to the combined rinse and scale collecting system the units are especially low in maintenance. In case of using demineralised water the units are almost maintenance free.

The HeaterLine Professional is exactly the right choice for professional and continuous operation where precision plays a key role.
